

Open Science Droplets

Instituto de Astrofísica de Andalucía, IAA-CSIC

Open Science Droplets TimeLine

Pre-pandemic era ○

Jupyter Notebooks

One month ago ○

Software management with Conda

Two weeks ago ○

Collaborative science online with GitHub

Today ○

Version control with Git (episode I)

Next session ○

Execute your research in the cloud. Binder

Open Science Droplets

Open Science Droplets

```
$> git init
```

One person starting a new repository locally

```
$> git clone
```

Downloading and using locally an existing repository
(including all of the files, branches, and commits.)

Open Science Droplets

```
$> git status
```

It shows you what branch you're working on, what files are in the working or staging directory, and any other important information (deleted, modified, ...)

Open Science Droplets

```
$> git add
```

Adds a change in the working directory to the staging area.

```
$> git rm
```

Remove files from the working tree of the staging

Open Science Droplets

```
$> git commit
```

Commits are snapshots of your entire repository at specific times, it tells a story of the history of your repository (🤪 ready for time travel)

Open Science Droplets

```
$> git log
```

It allows you to view information about previous commits that have occurred in your repository

Open Science Droplets

```
$> git push origin main
```

Upload your local repository content to a remote repository.

Open Science Droplets

Many changes / Grouped changes

```
$> git add
```

```
$> git commit
```

```
$> git push
```

Open Science Droplets

```
$> git checkout
```

You want to restore a historic version of a specific file

Open Science Droplets

```
$> git checkout main
```

You want to restore a historic version of a specific commit or branch

Open Science Droplets

```
$> git diff <ID> <ID>
```

Comparing two commits

Open Science Droplets

```
$> git checkout -b <name>
```

Creating a new branch locally

Open Science Droplets

```
$> git branch
```

List and manage your branches

Open Science Droplets

```
$> git push origin plot_messier
```

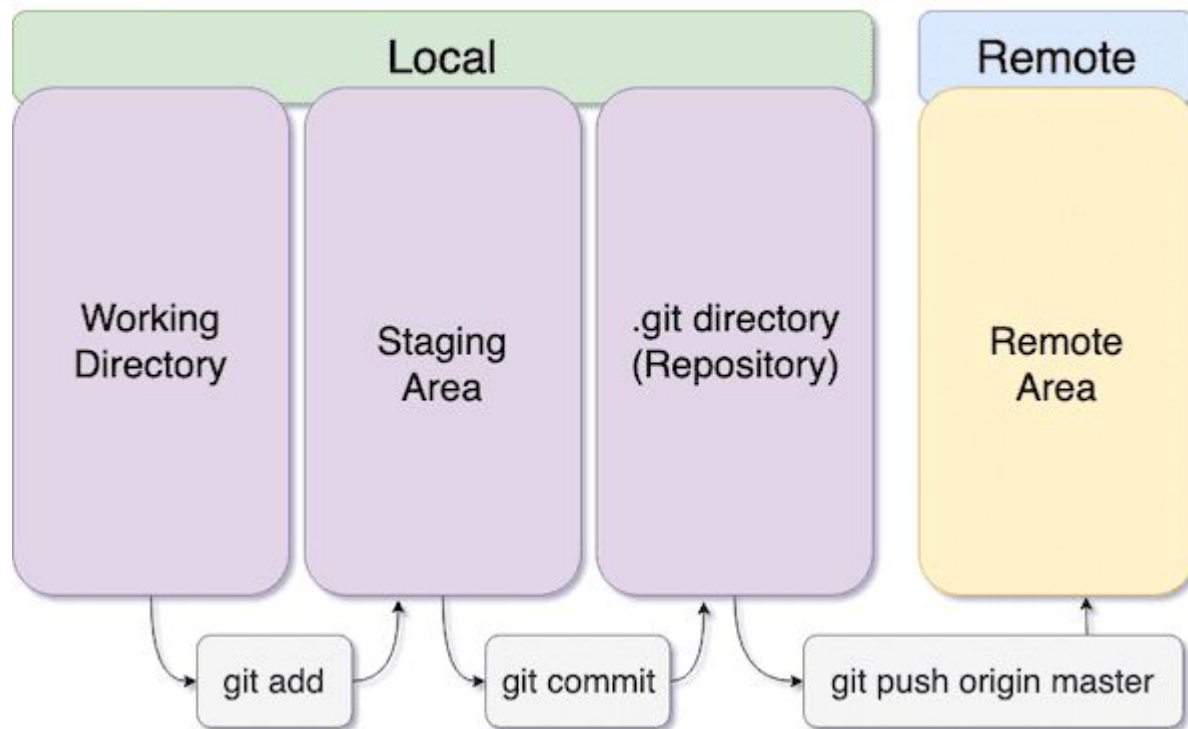

Uploading changes to Github, from local to the new branch

Open Science Droplets

```
$> git pull
```

Updating your local copy of the repository with the new changes that are in Github.

Git Basic Workflow Lifecycle

Feature A-1

Feature A

Master

Feature B
